

Geospatial Extensions **geoEXT**

Extending your GIS investment

Rebate EXT

- **Rebate EXT** graphically indicates which lots are eligible for rebates and when checks can be issued.
- **Rebate EXT** creates multiple subdivisions from a selection of lots based on common attributes.
- **Rebate EXT** makes it easy to search for rebate lots by relevant fields; like developer, subdivision, and check number.
- **Rebate EXT** supports ArcGIS® for Desktop 10.0 through 10.5.1

- **Rebate EXT** allows the user to define several conditions that **revoke payment eligibility** including;

- ☑ A residential service is not connected
- ☑ The residential service is not active
- ☑ A check has already been issued
- ☑ The subdivision contract has expired
- ☑ The allocated number of lots has been exceeded
- ☑ The subdivision budget has been exceeded
- ☑ The builder has been disqualified
- ☑ The lot is not in a targeted subdivision

“As the economy rebounds and developers begin work again, we have a way to track the lots that are being developed, those that have had rebates paid, and those that are eligible for payment of rebates to developers”

Scott Lee—Central Alabama Electric Cooperative
